

1. GENERAL WELL INFORMATION

Well Name	Alpha-03	Well ID	W003
Field	Field_Alpha	Block	Block_2
Spud Date	03-08-2024	Rig Release Date	26-08-2024
Total Depth (TD)	3060 m	Rig Name	Rig Sagar-4
Well Type	Vertical Development	Trajectory	Vertical

2. FORMATION INFORMATION

Formation_X (unconsolidated sand-shale sequence) was encountered between **2860 m** and **3090 m**. Although located in an adjacent block, W003 encountered the same Formation_X sand at a similar depth to W001 and W002, confirming the loss zone extends across the field.

3. LITHOLOGY SUMMARY

Interval (m)	Formation	Lithology	Notes
2550-2860	Formation_W	Shale, grey, firm	Normal drilling trend
2860-3030	Formation_X	Sand, friable, interbedded shale	Loss-prone; monitor returns
3030-3060	Formation_Y	Shale, grey-black, hard	Normal drilling trend

4. HISTORICAL DRILLING EVENTS

Event 1: Partial Mud Loss at approximately 2920 m

Observation: Mud returns dropped noticeably while drilling the Formation_X sand streak, matching the pattern recorded in W001 and W002.

Engineering Action: Drilling was paused, an LCM pill was pumped across the loss interval, and mud weight was trimmed from 1.19 SG to 1.15 SG.

Outcome: Full returns were re-established within roughly 90 minutes and drilling continued to total depth without further losses.

5. CASING AND COMPLETION SUMMARY

Casing	Size (in)	Set Depth (m)	Cement Top (m)
Conductor	20	58	Surface
Surface	13-3/8	645	Surface
Intermediate	9-5/8	2420	1180
Production	7	3060	2250

6. RECOMMENDATION

Given the consistent loss behaviour of Formation_X across W001, W002, and W003, pre-mix LCM pills before entering 2850 m for any future offset well in this field and budget non-productive time accordingly.

This Well Completion Report is a synthetically generated historical record produced for the NWIS prototype (W003). Not associated with an actual drilling operation.
